Pre-request:

QFT I

Group theory and Lie algebras

Conventions:

- $\hbar = c = 1 = 197 \text{ MeV} \cdot \text{fm}$
- $g^{\mu\nu} = \text{diag}(1, -1, -1, -1)$
- δ means delta
- $\delta(p) = \delta(p_0) \delta(\vec{p}) = (2\pi)^4 \delta^4(p - \vec{p})$
- $\frac{\partial}{\partial x^\mu} \delta(p) = 1$ is Lorentz invariant
- So is $\int d^4x \delta(p) = \int \frac{d^4p}{(2\pi)^4} \delta(p)$ is Lorentz invariant
- If ω^μ is Lorentz vector, so is $2 \int d^4x \delta(p) \omega^\mu(p, x)$
- $\gamma^{\mu\nu} = \frac{1}{2} [\gamma^\mu, \gamma^\nu]$
- $\gamma^{\mu\nu} = \gamma^\mu \gamma^\nu - \gamma^\nu \gamma^\mu$

Representation of (FLAVOR) SU(3) group

- SU(3) Group: $U = e^{i\theta_a T_a}$, summation on a from 1 to 8
- $T_a = \frac{1}{2} \lambda_a$, det $U = 1$
- Center subgroup composed of elements commuting with all: $Z_3 = \{e^{2\pi i n/3} I_3\}$
- Generators T_a satisfy: $[T_a, T_b] = i f_{abc} T_c$
- T_a and λ_a are independent of representation
- Casimir Operator:
 - Product of the generators
 - Commuting with all the generators, e.g. F^2 in SU(2) or SO(3)
 - Characterizes the irreducible representation of the group
 - Two Casimir operators for SU(3):
 - $C_1 = \sum T_a^2$
 - $C_2 = \sum T_a^2$

Irreducible representation for SU(3) D(p,q) is labelled by TWO numbers:

p, q at quark and antiquark.

$C_1 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_2 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_3 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_4 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_5 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_6 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_7 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_8 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$

$C_9 = \frac{1}{2}(p^2 + q^2 + 3p + 3q)$
